CAPITAL FARM

by KRYONOM

AUTOMATED TRADING SOFTWARE

YOUR CAPITAL ORGANISM

Automated trading software built to grow its owner's capital — configured for you, with a dashboard, risk limits, documentation and guided deployment through to your own exchange account.

FOUNDING OFFER PERIOD

Ends 31 October 2026 at 23:59, Tallinn time, or when all five founding places are confirmed, whichever comes first.

€750	3	~3 wk
founding price for the first five confirmed clients, until 31 October 2026	stages from configuration to live trading	target for your first configured version

VERSION 2.1 · 29 SEPTEMBER 2026 · DOCUMENT KRY-FP-MEMO-001

PREPARED BY STEVEN ALBER · KRYONOM CAPITAL FARM · KRYONOM.COM · HELLO@KRYONOM.COM · T.ME/KRYONOM

01 / THE PRODUCT

Automated trading software with a clear economic objective

KRYONOM is building automated trading software with a clear economic objective: to grow the owner's capital through disciplined execution, controlled exposure and measurable results.

Each installation is a capital organism: one identified software instance with its own configuration, risk limits and history. It reads the market continuously, decides by defined rules, checks every proposed trade against its limits, executes permitted orders and records every decision, cost and result.

01 Reads live market data → 02 Decides by defined rules → 03 Checks its risk limits → 04 Executes permitted orders → 05 Records every result

What you acquire

- **Your own capital organism** — a client-specific software instance and the right to use it for your own capital.
- **Configuration by KRYONOM** — market, strategy version and risk limits set up for you and recorded in your implementation record.
- **Control and visibility** — a dashboard with decisions, orders, fees, balances and results, and documented controls to pause, stop and resume.
- **Guided deployment to live trading** — from your first configured version to automated trading on your own exchange account.

How your organism starts: the automated trial with live market data

Your capital organism runs automatically during the trial. It follows live market prices, evaluates trading opportunities, applies its risk rules and records simulated purchases, sales, fees and balances. You can follow its activity through the dashboard without making each trading decision yourself. At this stage, the software uses a virtual balance and does not send orders to your exchange account or use your trading funds.

THE CORE IDEA

You buy your own automated capital organism and its guided deployment — configured, documented and brought into operation step by step.

02 / THE PACKAGE

What €750 includes

One founding price covers your software, its configuration and the guided path to real-money operation.

Included	What it means for you
Right to use your capital organism	Continuing use of one client-specific capital organism for your own capital, identified by release version and checksum
Configuration and dashboard	KRYONOM configures the market, strategy version, virtual starting balance and risk limits, and sets up your dashboard
Risk limits and traceability	Recorded limits on capital use and order size; every decision, order, fee and result is logged and visible
Automated trial with live market data	Your organism runs automatically on live prices with a virtual balance, so its behaviour and results can be checked before trading capital is committed
Real-money version and first activation	Once the supported exchange connection and its checks are complete and you authorise it, KRYONOM activates automated trading on your own exchange account
Guided setup of that transition	Connection guide, limit configuration and a guided activation session
Documentation and handover	Installation and operating guide, release notes, trial report and handover walkthroughs

The real-money version of your software and its first guided activation are part of this package. They are delivered when the supported exchange connection and its checks are complete — not sold separately.

> NOT INCLUDED IN THE PACKAGE PRICE
>
> Your trading capital, exchange fees, and any hosting or maintenance service agreed separately in writing. None is needed to start; any such cost is identified and agreed before it is incurred.

Founding clients

The €750 founding price applies to the first five confirmed clients within the offer period, which ends on 31 October 2026 at 23:59, Tallinn time, or earlier when all five founding places are confirmed. The founding package has the same scope as the Complete package, whose standard price is €3,500 from 1 November 2026. The Core (€1,500) and Guided (€2,500) packages available from the same date include less implementation support; they do not reduce the founding package. Founding clients may also follow the development work and share feedback: an optional extra, never a requirement.

Continuing use

You keep the right to use your delivered capital organism, with its configuration and documentation. The reusable KRYONOM framework and its intellectual property remain with KRYONOM unless a transfer is agreed in writing.

> EXISTING AGREEMENTS
>
> Version 2.1 sets the founding offer period and states the standard prices that apply from 1 November 2026. It does not change the agreed scope of founding client agreements confirmed before it was issued.

03 / THE PATH

From configuration to live trading in three stages

Your organism is brought into operation in three stages. Each stage ends with something you receive and can check.

	1 · Configuration	2 · Automated trial	3 · Real-money activation
KRYONOM	Prepares your configuration, installs or guides the installation and verifies the first start	Monitors the run, resolves findings in versioned updates and prepares the trial report	Supplies and verifies the exchange connection, configures the agreed limits and guides activation
The software	Receives live market data and completes its first decision cycles	Runs automatically on live prices with a virtual balance and records simulated trades, fees and balances	Submits permitted orders automatically to your exchange account within the agreed limits
You	Approve your recorded profile and confirm dashboard access	Keep the host running, follow the dashboard and review the trial report	Open and fund your own exchange account, create the API key as instructed and authorise activation
You receive	Your configured software, implementation record, dashboard access and operating guide	Trial report, acceptance record and a walkthrough of the controls	Activation record, live monitoring plan and live incident procedure
Status	READY core software working IN PREPARATION your version: target ≈ 3 weeks	READY runs today on the development system	IN DEVELOPMENT exchange connection in development; date not yet confirmed

The route in detail

01 Configuration ▶ 02 Trial check ▶ 03 Results and reliability review ▶ 04 Exchange connection check ▶ 05 Your confirmed activation ▶ 06 Normal use and monitoring

After activation, your organism trades within its limits, you monitor it through the dashboard, and improvements arrive as identified, versioned releases.

04 / STAGE 2

The automated trial with live market data

This trial checks that your configured software receives data correctly, follows its rules, records costs and balances accurately, and responds to interruptions as expected. It also lets you inspect its trading results under the stated simulation assumptions before committing trading capital.

Setting	Trial configuration
Instrument	Bitcoin against euro (BTC–EUR)
Market data	Kraken public market data
Decisions	TREND-1 strategy on four-hour closed candles
Trial balance	€500 virtual balance
Fee assumption	0.80 % per trade (simulated taker fee)
Leverage	None
Exchange account	Not needed during the trial

Your exact values, and the length of your trial window, are recorded in your implementation record before the first run.

What automated operation means in practice

The engine runs on a computer or server that stays on, with a network connection. You do not make each trading decision yourself: you follow the activity on the dashboard and use the documented controls to pause, stop or resume. Automated does not mean maintenance-free — power, network or host interruptions and software updates need attention, and the trial shows how your installation handles them.

What the trial report shows

Technical behaviour — data coverage, rule compliance, costs, balances and recovery from interruptions — and trading results under the stated simulation assumptions, reported separately so that each can be judged on its own.

05 / STAGE 3

Real-money operation on your own exchange account

For real-money operation, KRYONOM supplies and verifies the supported exchange connection, configures the agreed limits and guides you through activation. Once the required checks are complete and you authorise activation, the organism can submit permitted orders automatically to your own exchange account. Your trading capital stays in that account.

How trading starts

1. KRYONOM confirms the supported exchange and connector for your account.
2. You open or use your own account through the exchange's official process and decide how much capital to place in it.
3. You create an API key with trading permission only. Withdrawal permission is never needed.
4. KRYONOM verifies account reading and reconciliation before any order can be sent.
5. The agreed limits are recorded and you confirm activation in writing.
6. Automated trading starts, with a monitoring plan from the first day.

How you stay in control

- Your capital stays in your own exchange account. KRYONOM never holds your funds.
- Limits on allocated capital, order size and losses define what the organism may do.
- Documented controls pause new entries, stop the organism or close a position.
- Every decision, order, fee and balance is recorded and reconciled with your account.

INCLUDED IN YOUR PACKAGE

The real-money version and its first guided activation are part of the €750 package. Its status and dates are set out on the next page.

06 / STATUS

Where things stand today

What already works and what is being completed, as at 26 September 2026.

Capability	Status	Detail
Live market data intake	READY	BTC–EUR from Kraken public data, running on the development system
Automated decisions with risk checks	READY	TREND-1 on four-hour candles; refused signals are recorded
Simulated execution, fees and accounting	READY	Balances and fees reconciled against the simulated exchange
Dashboard and controls	READY	State, capital, decisions, orders and fees; pause, stop and resume
Technical run report	READY	Checks data coverage, uptime evidence and record consistency
Your configured version and installation	IN PREPARATION	Target ≈ 3 weeks from payment and completed onboarding
Seven-day server trial	PLANNED	Planned; not yet started
Results report	IN DEVELOPMENT	Net result after costs, drawdown and baseline comparison
Exchange connection for real orders	IN DEVELOPMENT	Exchange and connector being selected and tested
Real-money activation procedure	IN DEVELOPMENT	Delivered together with the exchange connection

Dates and status updates

Your first configured version is targeted for about three weeks after confirmed payment and completed onboarding. Stage 3 does not yet have a confirmed date: it depends on completing and verifying the exchange connection. Until it has one, you receive a written status update at the Stage 2 handover and then every two weeks, stating what was completed, what remains and the next expected step.

Measuring results

Capital growth is the objective, so results are measured rather than assumed. The results report in development shows net result after all costs, maximum drawdown, capital actually used, number of trades, the observation period, and a comparison with a simple baseline such as holding the same balance unchanged or holding BTC. A technical test pass shows that the software works as configured; on its own it does not show economic performance.

07 / BEFORE YOU BUY

Risks to understand

This page sets out, in one place, the risks to weigh before buying.

- **The trial uses a virtual balance.** Its results are simulated under stated fee, fill and price assumptions and do not show what a real account would have earned.
- **Trial results do not prove future returns.** Profitable trial periods can be followed by losses, and a sound system has losing periods too.
- **Real-money trading is not available yet.** The exchange connection is in development and has no confirmed date. Nothing trades with your money when you receive these documents or your first configured version.
- **You can lose money.** Once real-money trading is active, the capital you allocate is exposed to market risk and can fall substantially. Limits reduce exposure but cannot exclude losses from price gaps, fees, partial fills or outages.
- **Automated is not maintenance-free.** The engine depends on a running host and a network connection; interruptions and updates need attention.
- **This is software, not an investment service.** The €750 buys software and implementation services. KRYONOM does not hold your funds or manage money on your behalf, gives no financial, investment or tax advice, and promises no return or income.

YOUR CONTROL

You decide whether and when real-money trading starts, how much capital your organism may use, and when to pause or stop it.

08 / TERMS

Founding client terms and how to start

Term	Arrangement
Package price	€750 one-time — founding price for the first five confirmed clients
Offer period	Ends 31 October 2026 at 23:59, Tallinn time, or when all five founding places are confirmed, whichever comes first
Standard price for the same scope	€3,500 — the Complete package, from 1 November 2026
Included	Right to use your capital organism, configuration, dashboard, risk limits, automated trial, real-money version with first guided activation, documentation
Not included	Trading capital, exchange fees, separately agreed hosting or maintenance
First configured version	Target ≈ 3 weeks from confirmed payment and completed onboarding
Real-money activation	After the exchange connection is verified and you authorise it — date to be confirmed
Status updates	In writing at each stage handover, and every two weeks while a stage date is unconfirmed
Written order confirmation	States the supplying entity, payment method, support period, and cancellation and refund terms
Existing agreements	Founding client agreements confirmed before version 2.1 keep their agreed scope

How to start

1. Reply “KRYONOM” in the conversation where you received this document, or write to hello@kryonom.com with the subject “KRYONOM founding package enquiry”.
2. Receive your order confirmation and payment instructions in that same conversation.
3. After payment, receive the Activation and Onboarding Pack — KRYONOM starts configuring your capital organism.

RESERVE YOUR CAPITAL ORGANISM

Reply **“KRYONOM”** to reserve one of the five founding places before the offer period ends. Payment details are only ever sent through that confirmed conversation.
